almost half a century ago the Australian National University's Tim Millar penned a seminal book on Australian defence policy in the lead up to the Vietnam War. Today Australia's defence forces are returning from long conflicts overseas while the rise of China and the economic integration in the Indo-Pacific presents a complex mix of challenges and opportunities. Drawing inspiration from Millar's original volume, *Australia's Defence Towards a New Era* brings together leading experts to examine the domestic and international context of Australia's defence policy, Australian strategy and the size and state of our armed forces as the country heads towards a new era. This book provides an in-depth overview and key insights into the past, present and future of Australia's defence.

Combining theoretical and empirical approaches, this book examines the role that international public administrations play in global environmental politics in the Anthropocene. With chapters written by leading experts in the field, this text offers fresh insight into how international bureaucracies shape global policies in the complex areas of climate change, biodiversity and development policy. International public administrations are thus recognized as partially autonomous actors with their own interests and motivations, assuming the roles of managers, orchestrators, brokers or attention seekers. This comprehensive resource provides scholars and practitioners with valuable insight into environmental policymaking and how international public administrations might be transformed to better address the multiple fundamental challenges of our century. War is too important to be left to the generals, declared French Prime Minister Georges Clemenceau over a century ago, but which civilians exactly play the most important roles in controlling the armed forces? When civilian control is studied, the focus is typically on those in the upper echelons of the executive branch: presidents, prime ministers or defense secretaries. Yet because civilians in the executive may be tempted to hide problems or use the military in controversial ways, researchers must extend

a comprehensive proposal for reforming copyright law to ensure sustainable public access to research and scholarship open access is widely supported by researchers librarians scholarly societies and research funders as well as large and small publishers yet despite this support and the pandemic's demonstration of the importance of open access for scientific progress the scholarly publishing market is failing to deliver open access quickly enough in copyright's broken promise john willinsky presents the case for reforming copyright law so that it supports rather than impedes public access to research and scholarship he draws on the legal strategy of statutory licensing to set out the terms and structures by which the copyright act could ensure that publishers are fairly compensated for providing immediate open access what sets willinsky's analysis apart is its focus on the current state of scholarly publishing because copyright offers so little legal support for moving publishing to open access though it is best for science he says it is time to stop regarding the copyright act as a law of nature that can only be circumvented contravened or temporarily set aside specifically he proposes that the copyright act add a new category of work called research publications which would be subject to statutory licensing this would allow publishers to receive royalty payments from the principal institutional users universities industry r d research institutes and so on and sponsors of the work foundations and government agencies while providing immediate open access
