a laboratory of her own gathers diverse voices to address women s interaction with stem fields in the context of spanish cultural production this volume focuses on the many ways the arts and humanities provide avenues for deepening the conversation about how women have been

involved in excluded from and represented within the scientific realm while women's historic exclusion from STEM fields has been receiving increased scrutiny worldwide. Women within the Spanish context have been perhaps even more peripheral given the complex sociocultural structures emanating from gender norms and political ideologies dominant in nineteenth and twentieth century Spain. Nonetheless, Spanish female cultural producers have long been engaged with science and technology as expressed in literature, art, film, and other genres. Spanish arts and letters offer diverse representations of the relationships between women, gender, sexuality, race, and STEM fields. A laboratory of her own studies represents a diverse range of Spanish women and scientific cultural products from the late nineteenth through the twenty-first centuries. STEM topics include the environment, biodiversity, temporal and spatial theories, medicine, and reproductive rights. Neuroscience, robotics, artificial intelligence, and quantum physics. These scientific themes and other issues are analyzed in narratives, paintings, poetry, photographs, science fiction, medical literature, translation, newswriting, film, and other forms.

Mary Baker Eddy (1821–1910) is best known for founding the religion of Christian Science, an international institution which has extended beyond her lifetime and into the twenty-first century, often labelled as fringe theology rather than core philosophy. Eddy's work has remained on the peripheries of academia; her unmitigated idealism and occasionally nebulous style have led to a reluctance to apply a philosophical rigour to her thinking. In the philosophical foundations of Christian Science, Nicholas Sheldon rediscovers her as a radical philosopher, one of many female philosophers of her time who he contends should no longer be underestimated. Carefully analysing her non-linear style in order to understand her internal system of thought, Sheldon resolves flaws within her argument and draws out Christian Science's remarkable philosophical assertion that it is not only illness and suffering which are unreal, but the entire physical realm. For Eddy, it is only the spiritual which remains.
